MY JOURNEY INTO IT

I'm Anish Rajbanshi, currently pursuing my Bachelor of Information Technology (Honours) at Lincoln International College in Nepal, with a growing passion for cybersecurity and computer networking.

My interest in this field didn't come from a textbook — it came from wanting to understand how the systems we rely on every day actually work, and more importantly, how to keep them secure. That curiosity has pushed me to go beyond lecture slides and get my hands dirty: simulating real network topologies in Cisco Packet Tracer, configuring SSH for secure remote access, and working through IP addressing and subnetting problems until they made intuitive sense rather than just being formulas to memorize.

Alongside networking, I've built a solid foundation in programming through C++ and object-oriented design principles. I presented on advanced OOP concepts like inheritance and virtual base classes — an experience that sharpened not just my technical understanding, but also my ability to explain complex ideas clearly, which I see as just as important as writing good code. I've also spent time exploring Linux — its architecture, memory management, and networking behavior — because I believe genuine competence in cybersecurity starts with understanding the systems you're trying to protect.

What drives me isn't just technical skill, though. I take pride in being a fast learner, a reliable teammate, and someone who stays calm and analytical under pressure. Whether I'm troubleshooting a network configuration or collaborating on a group project, I focus on solving the actual problem rather than just getting through the task.

Right now, I'm also preparing for the IELTS exam, part of a broader effort to keep growing — professionally, technically, and personally — as I get ready to take the next step in my career.

I'm actively working toward becoming a capable, security-minded IT professional, and I'm looking for an opportunity where I can bring that dedication, apply what I've learned in networking and cybersecurity, and keep building real-world skills alongside people who can help me grow. I may be early in my career, but I bring genuine enthusiasm, a strong work ethic, and a hunger to keep learning — qualities that matter just as much as experience when it comes to hitting the ground running.

EDUCATION

Bachelor of Information Technology (Honours), Lincoln International College, Nepal — majoring with a focus on cybersecurity and computer networking.

CORE STRENGTHS

Computer Networking • Cybersecurity Fundamentals • Linux • Cisco Packet Tracer • C++ & OOP • SSH Configuration • IP Addressing & Subnetting • Network Troubleshooting • MS Word & PowerPoint

CAREER OBJECTIVE

To begin my professional career in the IT industry, where I can apply my knowledge of networking and cybersecurity, develop practical skills, contribute to organizational success, and continue growing as an IT professional.
